

2019

young women's summer institute

July 14–20, 2019 | Columbus, Ohio

Introducing young women to exciting STEM careers

The Young Women's Summer Institute (YWSI) gives Ohio's middle school girls a unique opportunity to gain valuable computer, math, science and engineering skills through hands-on, collaborative projects. Students entering the seventh or eighth grade are encouraged to apply for this weeklong program. YWSI girls develop a deeper interest in science, technology, engineering and math (STEM) as they use the latest computer technology to solve complex, real-world science and engineering challenges with a team of peers.

2019

summer institute

June 16–28, 2019 | Columbus, Ohio

Learn and explore the world of supercomputing

To prepare Ohio's future STEM field leaders, the Ohio Supercomputer Center (OSC) presents its Summer Institute (SI), a unique and intense two-week residential summer program for high school students entering their sophomore, junior or senior year. Participants experience the dynamic world of high performance computing as they work alongside peers and experts in the field to research complex, real-world science and engineering challenges using computational science.
